Summary

A third year Software Engineering undergraduate at SLIIT having an average CGPA of **3.7**, with hands-on experience delivering 4+ full-stack systems. Eager to apply modern technology as a solution to day-to-day problems and to learn new and emerging technologies by using them in various situations. Skilled in real-time systems integration, REST API design, and database management. Contribute positively to team projects while continuously learning and growing as a professional.

Education

Sri Lanka Institute of Information Technology (SLIIT)

Colombo, Sri Lanka

BSc (Hons) Information Technology in Software Engineering

July 2024 – July 2028 (Expected)

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence & Machine Learning, Database Design & Development, Computer Networks, Operating Systems & System Administration, Software Engineering, Web & Mobile Technology, Probability & Statistics
- Cumulative GPA- 3.7 (out of 4.0)

Bishop's College - Colombo 03

Colombo, Sri Lanka

G.C.E. Advanced Level (2023)- Physical Science (Maths) Stream

2021 – 2023

- Information & Communication Technology - A
- Combined Mathematics - B
- Physics - C

Sujatha Vidyalaya - Nugegoda

Colombo, Sri Lanka

G.C.E. Ordinary Level (2020)- 8 A's, 1 B

2010 - 2020

Technical Skills

Languages: Java, JavaScript, C, C++, PHP, HTML5, CSS3, Python, Arduino, Bash (Shell Scripting)

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Spring Boot

Databases: MySQL, MongoDB, Microsoft SQL

Mobile & IoT: Kotlin, Android Studio, ESP32

Systems & Infrastructure: Linux/Unix (file systems, process management, user administration), TCP/IP, OSI Model, DNS, DHCP, Virtualization basics

Developer Tools: Git, GitHub, Figma, Apache Tomcat, REST API, JWT Authentication, VS Code

Concepts: Full-Stack Development, OOP, System Design, Data Structures & Algorithms, SDLC, ITSM Fundamentals, Real-Time Systems, Agile/Scrum

Projects

Smart Gate Automation System (IoT + Computer Vision) | Academic Group Project - Embedded Systems & IoT

- Developed embedded control logic using Arduino (C/C++) on ESP32-CAM to process sensor inputs, handle OCR-based vehicle authentication, and control automated gate operations.
- Implemented Arduino-based motor control using integrated PIR sensors and LEDs, and enabled WiFi/HTTP communication with Blynk IoT for real-time monitoring and manual override.

WasteWise- Smart Garbage Management System (Web App + IoT) | Academic Group Project - IT Project Management

- Designed and developed the Complaint & Feedback Management module for a smart garbage management system integrating citizen reporting and IoT-based bin monitoring using React, Spring Boot REST APIs, MySQL, and Arduino C++.
- Implemented structured complaint lifecycle management, category-based reporting, responsive eco-themed UI design, and RESTful backend architecture while collaborating in an Agile environment using modular system design principles.

FoodDash- Food Ordering Mobile Application | Academic Group Project - Web and Mobile Technology

- Designed, developed, and deployed the full User Management module for a cross-platform food ordering system, covering user registration, secure login, and profile editing functionality using Node.js, Express, and MongoDB.
- Engineered a JWT-based authentication system with role-based access control (RBAC), enforcing distinct permissions and tailored dashboard experiences for three user roles: Customer, Driver, and Store Administrator.
- Collaborated in an Agile team of developers, adhering to RESTful API conventions, MVC architecture, and React Native mobile frontend; project successfully deployed and hosted in a live environment.

Web-Based Vehicle Spare-Parts Management System | Academic Group Project - Software Engineering

- Designed and developed customer-facing features including spare parts search, order history viewing, and product review functionality using Java Spring Boot and MS SQL.
- Collaborated in an Agile team environment, applying MVC architecture, RESTful APIs, and shared Figma-based UI design standards.

Web-Based Restaurant Table Reservation System | Academic Group Project - Object Oriented Programming

- Designed and developed the Menu Management module for a restaurant reservation system using Spring Boot, Apache Tomcat, MySQL, HTML, and CSS, enabling administrators to manage menu items, categories, pricing, and availability efficiently.
- Collaborated using GitHub in a team-based development environment while implementing CRUD functionalities, responsive user interfaces, and structured backend integration following RESTful and modular development practices.

Experience

Private ICT Tutor 2024 – Present

Self-Employed Home-Based Individual Tutoring

- Conducting one-on-one and small-group ICT classes for G.C.E. Advanced Level students, covering core concepts such as programming fundamentals, databases, networking, and system logic, tailored to individual learning needs.
- Prepare lesson plans, practice questions, and exam-oriented explanations to improve students’ understanding and performance, while developing strong communication, mentoring, and problem-solving skills.

Achievements & Activities

Dean’s List Awards- Academic Excellence in Year 1 Semester 1 2025

Semester GPA 4.0 (out of 4.0)
Sri Lanka Institute of Information Technology (SLIIT)

Computer Science Proficiency Recognition (Code.org, USA) 2024

Successful completion of 30+ comprehensive programming projects
Issued by DP Education Coding School

Academic Excellence 2023

G.C.E. Advanced Level – Z-Score: 1.5, Maths Stream
Bishop’s College Colombo 03

Academic Excellence 2020

G.C.E. Ordinary Level – 8 A's 1 B
Sujatha Vidyalaya Nugegoda
